

# GLUE-IT RE-PRO

## The self-adhesive translucent film for retro-projection.

Glue-it has been designed to respond to a precise market requirement: to obtain projections on transparent surfaces in an easy and quick way thanks to the applicable and removable foil.

The screen is made of a self-adhesive diffusion PVC foil for retro-projection with a non glare embossed surface to grant perfect diffusion (the uniformity of the images and the contrast can be improved further using a double layer of film).

The dotted sticker has no negative effect on the projection and allows quick application on different types of transparent surfaces, in particular on glass and plexiglass.

Ideal for the windows of offices, commercial activities, shops, and points of sales & advertisement in general, it doesn't require any particular tool or ability to be applied and is easily removable and reusable.

Its high brightness (16 maximum gain) grants very effective results.

It can be removed, washed, rolled and kept in the dedicated case supplied with it.

## Technical details

### Features

- Self-adhesive diffusion PVC foil for retro-projection
- Non glare, embossed surface (the uniformity of the images and the contrast can be improved further using a double layer of film)
- It sticks to different types of transparent surfaces
- Possibility of numberless attachments and removals
- Applications: windows of offices, commercial activities, shops, points of sales & advertisement in general and digital signage
- The dotted sticker allows to avoid bubbles to appear on the film

### Technical specifications

- Gain: single layer 16 , double layer 8
- Vision angle: single layer 50/60° , double layer 90/100°
- Weight: 145g/sqm
- Thickness: 140µ
